EXPLANATORY NOTES

1. **Source of Data.** Statistics of exports are based upon the declarations of exporters (export entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods exported is the actual amount received by the exporter in Canadian dollars, excluding such charges as freight, insurance and handling. In effect, therefore, export values are taken f.o.b. point of shipment for export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "gas engines and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles exported, while the value includes also the value of any parts of the article exported. For such items the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of "Exports of Canadian Produce" (also known as "Domestic Exports") include both goods wholly produced in Canada and goods previously included in statistics of imports which are changed in form or increased in value by further processing in Canada and then exported. Statistics of "Exports of Foreign Produce" (also known as "Re-Exports") include only goods previously included in statistics of imports which are exported from Canada in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.
5. **Exclusions.** Export statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods shipped to Canadian armed forces or diplomats stationed outside Canada, goods financed under the Defence Appropriation Acts and shipped to Canada's N.A.T.O. allies, temporary exports for exhibition or competition, and bunker supplies and ships' stores sold to foreign vessels in Canadian ports.
6. **Countries Credited.** Exports are credited to the country to which they are consigned at the time the goods leave Canada. The country of consignment is the country to which goods are intended to pass without interruption of transit, except in the course of transfer from one means of conveyance to another.
7. **Time Periods.** Export statistics for any month include all goods declared on export entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume II of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

Exports of Uranium Ores and Concentrates

Restrictions on the publication of statistics concerning exports of uranium ores and concentrates have recently been relaxed, and effective January 1, 1957, a new statistical item, No. 6560, has been established to cover this commodity. Statistics on the export of uranium ores and concentrates will now be published regularly in this report.

Prior to October, 1954, exports of uranium ores and concentrates were included in export statistical item 6580 at nominal values. This resulted in a significant undercounting of the total value of Canadian exports; during the first nine months of 1954 the shortfall amounted to \$17,000,000. Arrangements were therefore made to include the true value of uranium ores in the export totals, but to prevent figures relating to this commodity alone from being revealed these values were assigned to export statistical item 8490.

Now that the publication of statistics on uranium has become possible it has been decided to return this commodity to its proper statistical group. It is therefore necessary to adjust the totals of Group VI, Non-Ferrous Metals and Their Products, and Group VIII, Chemicals and Allied Products, for the period from October, 1954 to December, 1956 to take account of this transfer. These revisions will be included in the Annual Trade of Canada volumes for 1956 and subsequent years, and in monthly export reports commencing with January 1957. The value of exports of uranium ores and concentrates from October, 1954 to December, 1956 has been deducted from the Group VIII totals and from item 8490 and added to the Group VI totals.

The value of exports of uranium ores and concentrates during this period is given below. All these exports were to the United States.

Value, Price and Volume Indexes of Exports of Canadian Produce

The following table gives index numbers of the declared (statistical) value of exports of Canadian produce by months, and of the unit value (price) and volume of these exports. The value index expresses the value of exports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly export statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1190-1340) has been transferred to the "miscellaneous products" group; the item "ships" (9400) has been transferred to the "iron and steel and their products" group.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 - June, 1950 (1948 = 100)".

VALUE AND VOLUME at end of report

EXPLANATORY NOTES

1. **Source of Data.** Statistics of exports are based upon the declarations of exporters (export entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods exported is the actual amount received by the exporter in Canadian dollars, excluding such charges as freight, insurance and handling. In effect, therefore, export values are taken f.o.b. point of shipment for export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "gas engines and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles exported, while the value includes also the value of any parts of the article exported. For such items the average value per unit cannot be ascertained.
4. **Coverage.** Statistics of "Exports of Canadian Produce" (also known as "Domestic Exports") include both goods wholly produced in Canada and goods previously included in statistics of imports which are changed in form or increased in value by further processing in Canada and then exported. Statistics of "Exports of Foreign Produce" (also known as "Re-Exports") include only goods previously included in statistics of imports which are exported from Canada in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.
5. **Exclusions.** Export statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods shipped to Canadian armed forces or diplomats stationed outside Canada, goods financed under the Defence Appropriation Acts and shipped to Canada's N.A.T.O. allies, temporary exports for exhibition or competition, and bunker supplies and ships' stores sold to foreign vessels in Canadian ports.
6. **Countries Credited.** Exports are credited to the country to which they are consigned at the time the goods leave Canada. The country of consignment is the country to which goods are intended to pass without interruption of transit, except in the course of transfer from one means of conveyance to another.
7. **Time Periods.** Export statistics for any month include all goods declared on export entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume II of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

Value, Price and Volume Indexes of Exports of Canadian Produce

The following table gives index numbers of the declared (statistical) value of exports of Canadian produce by months, and of the unit value (price) and volume of these exports. The value index expresses the value of exports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly export statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1190-1340) has been transferred to the "miscellaneous products" group; the item "ships" (9400) has been transferred to the "iron and steel and their products" group.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 - June, 1950 (1948 = 100)".

VALUE AND VOLUME at end of report

EXPLANATORY NOTES

1. **Source of Data.** Statistics of exports are based upon the declarations of exporters (export entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods exported is the actual amount received by the exporter in Canadian dollars, excluding such charges as freight, insurance and handling. In effect, therefore, export values are taken f.o.b. point of shipment for export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "gas engines and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles exported, while the value includes also the value of any parts of the article exported. For such items the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of "Exports of Canadian Produce" (also known as "Domestic Exports") include both goods wholly produced in Canada and goods previously included in statistics of imports which are changed in form or increased in value by further processing in Canada and then exported. Statistics of "Exports of Foreign Produce" (also known as "Re-Exports") include only goods previously included in statistics of imports which are exported from Canada in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.
5. **Exclusions.** Export statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods shipped to Canadian armed forces or diplomats stationed outside Canada, goods financed under the Defence Appropriation Acts and shipped to Canada's N.A.T.O. allies, temporary exports for exhibition or competition, and bunker supplies and ships' stores sold to foreign vessels in Canadian ports.
6. **Countries Credited.** Exports are credited to the country to which they are consigned at the time the goods leave Canada. The country of consignment is the country to which goods are intended to pass without interruption of transit, except in the course of transfer from one means of conveyance to another.
7. **Time Periods.** Export statistics for any month include all goods declared on export entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume II of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

Value, Price and Volume Indexes of Exports of Canadian Produce

The following table gives index numbers of the declared (statistical) value of exports of Canadian produce by months, and of the unit value (price) and volume of these exports. The value index expresses the value of exports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly export statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1190-1340) has been transferred to the "miscellaneous products" group; the item "ships" (9400) has been transferred to the "iron and steel and their products" group.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 - June, 1950 (1948 = 100)".

VALUE AND VOLUME at end of report

EXPLANATORY NOTES

1. **Source of Data.** Statistics of exports are based upon the declarations of exporters (export entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods exported is the actual amount received by the exporter in Canadian dollars, excluding such charges as freight, insurance and handling. In effect, therefore, export values are taken f.o.b. point of shipment for export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "gas engines and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles exported, while the value includes also the value of any parts of the article exported. For such items the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of "Exports of Canadian Produce" (also known as "Domestic Exports") include both goods wholly produced in Canada and goods previously included in statistics of imports which are changed in form or increased in value by further processing in Canada and then exported. Statistics of "Exports of Foreign Produce" (also known as "Re-Exports") include only goods previously included in statistics of imports which are exported from Canada in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.
5. **Exclusions.** Export statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods shipped to Canadian armed forces or diplomats stationed outside Canada, goods financed under the Defence Appropriation Acts and shipped to Canada's N.A.T.O. allies, temporary exports for exhibition or competition, and bunker supplies and ships' stores sold to foreign vessels in Canadian ports.
6. **Countries Credited.** Exports are credited to the country to which they are consigned at the time the goods leave Canada. The country of consignment is the country to which goods are intended to pass without interruption of transit, except in the course of transfer from one means of conveyance to another.
7. **Time Periods.** Export statistics for any month include all goods declared on export entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume II of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Value, Price and Volume Indexes of Exports of Canadian Produce

The following table gives index numbers of the declared (statistical) value of exports of Canadian produce by months, and of the unit value (price) and volume of these exports. The value index expresses the value of exports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly export statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1190-1340) has been transferred to the "miscellaneous products" group; the item "ships" (9400) has been transferred to the "iron and steel and their products" group.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 - June, 1950 (1948 = 100)".
